MEMORANDUM FOR: Deputy Director for Intelligence

FROM: Director of Central Intelligence

SUBJECT: Soviet Activities in SDI

1. That's a very good and useful piece on Soviet activities in SDI. However, the concern goes beyond laser and particle beam weapons. As Max Kampelman said recently, they must have been working on the Siberian radar when they were signing the ABM treaty in 1972. Paul Nitze may also have made this point on last Sunday's David Brinkley show. In addition, they are probably working on and are certainly capable of building mobile missile defense interceptors, other radars, and their Moscow missile defense program has given them hot production lines.

2. By a copy of this memorandum I am asking Larry Gershwin to supply whatever information he has on Soviet missile defense research and development other than directed energy weapons.

William J. Casey

cc: National Intelligence Officer  
for Strategic Programs
